

Remarks

The indefiniteness cited in the Office Action has been remedied. Reconsideration of the rejection of the Applicants' claims respectfully is requested in view of the following remarks.

It is submitted that Inaba et al fails to anticipate the claimed invention in that the objectives and methods of achieving such objectives are different in the cited reference and the claimed invention. In Inaba et al, the objective is to provide a high resolution of the image displayed on display unit 20 which functions to indicate a vehicle condition sensed by unit 12, which is achieved by transmitting a signal from unit 12 through interface circuit 13 and switch 14 if the image resolution is sufficiently high, and alternatively transmitting a signal from graphic circuit 15 if the image resolution is poor, with the variances in resolution quality being illustrated in Figures 3 and 4. In the claimed invention, the objective is to monitor and make readily accessible, vehicle condition data which is achieved by sensing such vehicle conditions by a functional control unit and transmitting such sensed data to a remote output control unit in which such data is stored, periodically updated and accessed upon demand for display purposes. The claimed invention is not functional in discriminating between signals imposed on a display unit producing poor or high resolution images.

In view of the foregoing, it respectfully is requested that the rejection of claims 1-17 be withdrawn, such claims be allowed and further that the application be passed to issue.

The Director is hereby authorized to charge any deficiency in the fees filed, asserted to be
